300 Da	Very small collagen pieces
2,000 mg	Fish collagen in every stick
100 mg	Vitamin C · 100% of daily value

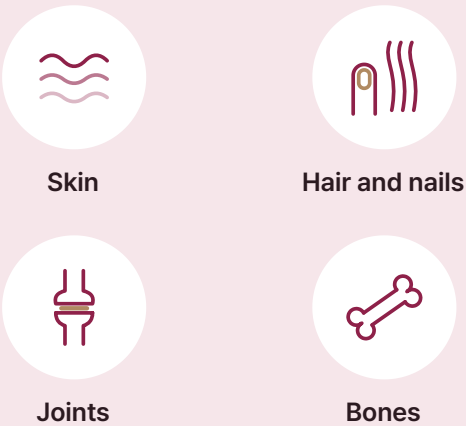

Peach flavour

30 sticks · 1-month supply

Collagen, simply

Collagen is the body's building protein

Your body makes collagen itself. It works like a frame that holds the body together.

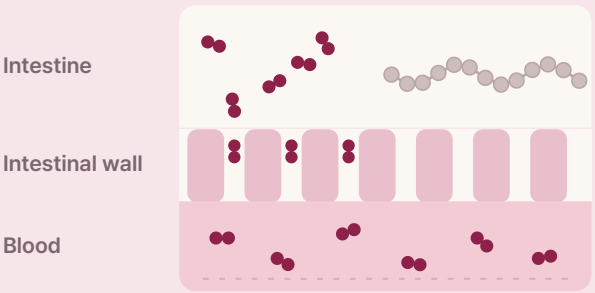

- About one third of all protein in the body is collagen.
- After about age 25, the body slowly makes less of it.
- **Yorosum Glow Peptide** gives 2,000 mg of fish collagen in one small stick.

Size matters

Why 300 Da is important

Da (dalton) measures the size of a molecule. The smaller the number, the smaller the piece.

Glow Peptide · 300 Da
Small pieces pass through

Typical collagen · 2,000–5,000 Da
Large pieces stay behind

- Collagen is absorbed in the intestine, through its wall.
- Large pieces must be broken down first. Small pieces pass through more easily.
- **Glow Peptide pieces are 7–17 times smaller** than typical collagen.

The helper

Why vitamin C is needed

Vitamin C is like a helper on a building site. The body needs it to build its own collagen.

Collagen pieces

Vitamin C

Body's own collagen

Vitamin C in one stick **100** mg

0% **100%** of daily value

- Vitamin C helps the body form normal collagen for skin, bones, cartilage, gums and teeth.
- The body cannot store vitamin C for long, so it needs it every day.
- **One stick gives 100 mg**, which is 100% of the daily value of vitamin C.

Every day

How to take

1 stick

1 glass of water

Every day for 10–12 weeks

IN ONE STICK (3 G)

Fish collagen peptide	2,000 mg
